

Bases de datos 2023-1

Práctica 1: Bitácora

4 de septiembre de 2022

Reporte de instalación:

1. *Sistema operativo y versión:* GNU linux 5.19.5-zen (zen kernel)
2. *Distribución:* Arch linux
3. *Versión de la instalación:* psql (PostgreSQL) 14.5
4. *Tiempo requerido:* 15min
5. *Paso a Paso:*
Primero busqué los paquetes correspondientes en los repos de arch. Me tuve que asegurar de que postgresql-contrib no era necesario para la instalación.

Luego actualice el sistema:

sudo pacman -Syu

```
angelalk ~/ActiveSemester/Databases/lab/p1  sudo pacman -Syu
[sudo] password for angelalk:

```

Cambiar a usuario de postgres:
`sudo -iu postgres`

Comando para iniciar cluster de postgres:
`initdb -D /var/lib/postgres/data`

```
angelalk ~/ActiveSemester/Databases/FBD-2023-1/Practica01 ▸ sudo -iu postgres
[postgres@coppper ~]$ initdb -D /var/lib/postgres/data
The files belonging to this database system will be owned by user "postgres".
This user must also own the server process.

The database cluster will be initialized with locale "en_US.UTF-8".
The default database encoding has accordingly been set to "UTF8".
The default text search configuration will be set to "english".

Data page checksums are disabled.

creating directory /var/lib/postgres/data ... ok
creating subdirectories ... ok
selecting dynamic shared memory implementation ... posix
selecting default max_connections ... 100
selecting default shared_buffers ... 128MB
selecting default time zone ... America/Mexico_City
creating configuration files ... ok
running bootstrap script ... ok
performing post-bootstrap initialization ... ok
syncing data to disk ... ok

initdb: warning: enabling "trust" authentication for local connections
You can change this by editing pg_hba.conf or using the option -A, or
--auth-local and --auth-host, the next time you run initdb.

Success. You can now start the database server using:

    pg_ctl -D /var/lib/postgres/data -l logfile start

[postgres@coppper ~]$
```

Activamos el servicio de postgres:
`sudo systemctl enable --now postgresql.service`

```
angelalk ~/ActiveSemester/Databases/FBD-2023-1/Practica01 ▸ systemctl status postgresql.service
● postgresql.service - PostgreSQL database server
   Loaded: loaded (/usr/lib/systemd/system/postgresql.service; enabled; preset: disabled)
   Active: inactive (dead)

angelalk ~/ActiveSemester/Databases/FBD-2023-1/Practica01 ▸ sudo systemctl enable --now postgresql.service
angelalk ~/ActiveSemester/Databases/FBD-2023-1/Practica01 ▸ systemctl status postgresql.service
● postgresql.service - PostgreSQL database server
   Loaded: loaded (/usr/lib/systemd/system/postgresql.service; enabled; preset: disabled)
   Active: active (running) since Sun 2022-09-04 14:11:50 CDT; 3s ago
     Process: 2776 ExecStartPre=usr/bin/postgresql-check-db-dir ${PGROOT}/data (code=exited, status=0/SUCCESS)
    Main PID: 2778 (postgres)
       Tasks: 7 (limit: 1377)
      Memory: 15.3M
         CPU: 171ms
    CGroup: /system.slice/postgresql.service
            └─2778 /usr/bin/postgres -D /var/lib/postgres/data
              └─2780 "postgres: checkpoint "
                └─2781 "postgres: background writer "
                  └─2782 "postgres: walwriter "

                      └─2784 "postgres: stats collector "
                        └─2785 "postgres: logical replication launcher "
```

Desde el usuario de postgres entramos al cliente y cambiamos la contraseña:
`psql`
`ALTER USER postgres WITH PASSWORD 'notmyrealpassword';`

6. Comentarios y problemas:

El paquete `postgresql-contrib` no tiene equivalente en Arch, al parecer lo que tiene ya lo satisface el paquete de postgres.

En Arch tienes que correr un comando para iniciar el cluster y luego activar el servicio de postgres, casi me equivoco.
